Dear Gus,

We have to complete one little formality before official acceptance of the detail re-correlator. Attached is a form which our equipment engineering people need. Will you please complete it and return to me. Also add any additional requirements which you may think we need to properly operate the correlator. One thing which we will add to it here is a charcoal filter behind the fan. Our chemical safety officer has required this because of our recycling air system.

Yours very truly,

Dick S.
